Grimley & Holt Primary School and Ombersley First School

"I really enjoyed working with new children and doing the funny challenges, my favourite was trying to make a reindeer with a red nose out of paper, card & lights. I also really liked playing football with the Ombersley children at break time."

George

"I loved working with another school and meeting new people. Physics is pretty interesting for me, and the challenges were really fun! I especially liked how we were able to work as a team."

Bilal

"Everyone worked as a team, everyone made new friends, they were very playful and had a great personality. My favourite mission was picking photos of physics and I loved making the Christmas tree with spaghetti and marshmallows, all the sculptures looked sculptastic!"

Alfie

TASKMASTER

We had some very excited children on Monday morning, the idea of going on a coach with their friends was the best thing ever! We had lots of questions about where we were going, and what we were going to be doing at 'the new School' as they called it. My favourite question which did make me smile was 'are we walking back to school!'

The aim of the trip was to take part in an Ogden Trust Collaboration with Oldbury Park Primary School. The aim of the morning, to get the children excited about physics.

The carousel of activities was explained, and the children couldn't wait to get started. There were a range of activities that involved many scientific skills, observing, predicting and questioning. Some of the activities were magic painting, rescuing the chicks from the ice, sinking eggs and keeping Humpty Dumpty safe.

School

We used funding from the Ogden Trust towards having a VR Space workshop come into school as part of a science week enrichment. An excellent opportunity and the children retained so many facts.

Summer STEM day

Pupils from the North Worcester Partnership enjoy a trip to their local university.

Published: 8 July 2022

For their Summer term partnership event, the Worcester North Ogden Partnership worked collaboratively with their local university STEM Ambassador to host an event at Worcester University. The aim of the event was for partnership teachers to strengthen links with the STEM Ambassador so schools would begin to take full advantage of the facilities and resources at the university which are available for the schools to support future learning.

"We hoped that an event with a university would give pupils a window into further education, and even at such a young age we hoped the experience would enrich their learning and continue to inspire them and their interest in science," explains partnership co-ordinator Sally Patterson, a teacher at hub school Grimley & Holt CE Primary.
